Living Pastures

- One of our specialties is pasture management and improvement.
- The benefits are nutrient recycling, insect and microbial diversity, natural mulch soil protection, increased soil humus production and less reliance on chemicals.
- We are experienced at intergrating livestock into the pasture system to improve the soil life and increase organic carbon levels.
- We can show you working examples currently in operation and advise you on how to further improve the quality and life of your soils.

Schedule of fees

Contact us as soon as possible and see what we can do for your soil.
