## Recovery spray system

Pridham Viticulture can provide recovery spraying of vines for the application of Dormex, Waiken, Mite sprays etc, and early season fungicide application. The recovery unit is useful to apply thorough spray coverage to the point of run-off using low water volumes with the ability to capture and recycle overspray. Also suitable for use in moderate wind conditions.

Chemical cost savings are significant due to low spray volume required and overspray re-use.

### Schedule of fees

\$95.00p/h + GST inclusive of complete unit and operator

### Transport

McLaren Vale region - \$67.00 p/h

Other areas POA if truck transport required.

### Other related services we offer for this period in vineyards
